URL: <http://scip.zib.de/>
 Authors: Gerald Garrath, Antonio Gleisner, Gregor Heindl, Stephen J. Maher, Matthias Mitterberger, Benjamin Miller, Marc Pfetsch, Felipe Serrano, Dieter Weninger, Jakob Wegl
 Platforms: Linux, Windows, Mac OS
 Licence: ZIB academic license
 Current version: 3.2
 Dependencies: LP solver, e.g. SoPlex, CPLEX, XPress, ...
 Add information on this software.

Keywords for this software: mixed integer programming, combinatorial optimization, integer programming, cutting planes, branch-and-cut, polyhedral combinatorics, constraint programming, SAT, column generation.

References in zbMATH (referenced in 139 articles):
 Showing results 1 to 10 of 139. Articles sorted by year (relevance) [▼]

- Humpola, Jaseco; Rögenschuh, Armin; Lehmann, Thomas: A primal heuristic for optimizing the topology of gas networks based on dual information (2019)
- Wimmer, Raif; Jansen, Mis; Abraham, Erika; Kalten, Josef-Pieter: High-level counter-examples for probabilistic automata (2019)
- Abraham, Erika; Becker, Bernd; Delort, Christian; Jansen, Mis; Kalten, Josef-Pieter; Wimmer, Raif: Counter-example generation for discrete-time Markov models: an introductory survey (2014)
- Arnaldi, Edoardo; Congio, Stefano; Guaiardo, Stefano: Coordinated cutting plane generation via multi-objective separation (2014)
- Arnold, T.; Henson, R.; Miller, A.; Vigerale, S.: A mixed-integer stochastic nonlinear optimization problem with joint probabilistic constraints (2014)
- Ballester, Martin; Michaels, Dennis: Extended formulations for convex envelopes (2014)
- Berthold, Timo; Pfetsch, Marc: The global rounding (2014)
- Berthold, Timo; Gleisner, Antonio M.; Undercover, a primal MINLP heuristic exploring a largest sub-MIP (2014)
- Bussack, Michael R.; Dreise, Stefan P.; Vigerale, Stefan: PAVER 2.0: an open source environment for automated performance analysis of benchmarking data (2014)
- Ceselli, Alberto; Righini, Giovanni; Traversi, Emanuele: Combined location and routing problems for drug distribution (2014)

Visit our website: swmath.org

swmath.org

swMATH offers **free access** to a large database with information on software in all mathematical fields from large general purpose systems to small packages. For each software it provides meta data, a short description, the URL, keywords, relevant MSC classes, a list of related software and, most importantly, a list of peer reviewed mathematical articles referring to the software with a link to the reviewing database zbMATH.

The unique and novel feature of swMATH besides its scope is the **publication-based approach**. Articles that are represented in zbMATH are used to identify mathematical software and to generate relevant information about it. This is mainly done automatically. Easy maintenance, a complete coverage of all mathematical topics and continuous updates of software packages and articles are important features of this database.

swMATH is a community-driven service. It has been developed by FIZ Karlsruhe and the Mathematisches Forschungsinstitut Oberwolfach supported by a project of the Leibniz Association. It is maintained by FIZ Karlsruhe with its database zbMATH and with support by the Berlin Forschungscampus MODAL.

We appreciate your feedback:
